Interpretation Ref. Range

eGFR - Estimated Glomerular Filteration Rate is calculated by MDRD equation which is most accurate for GFRs ≤ 60ml / min /1.73 m².MDRD equation is used for adult population only.

<60ml/min/1.73 m² - Chronic Kidney Disease

<15 ml/min/1.73 m² - Kidney failure

Max ID No: SHPP486559 IP No. 206312/Bed-3214 Study Date 24/03/2021

NCV study is done in both upper & lower limbs with 'H'-reflex.

MNCS: Reduced amplitude was seen in left median & bilateral common peroneal nerve. Normal latency, amplitude & conduction velocity was seen in right median, bilateral ulnar & posterior tibial nerves.

SNCS:- SNAPs amplitude was not recordable in bilateral superficial peroneal nerve. Reduced amplitude was seen in left median & right ulnar nerves. Normal latency, amplitude & conduction velocity was seen in right median, left ulnar & bilateral sural nerves.

*F° waves :- F waves were not recordable in left common peroneal nervé, rest normal.

'H'-reflex:- Elicitable on both sides.

EMG FINDINGS:-

Electromyography:- Concentric needle electromyography evaluation was done in below mentioned Muscles. Spontaneous muscle

EMG FINDINGS:- Spontaneous activity in the form of fasciculation, fibs & PSWs was seen in right biceps, right TA & bilateral VL muscles. Large amplitude long duration, polyphasic MUAP with moderate to discrete interference pattern was seen in right FDI, right biceps, left deltoid, bilateral VL & TA muscles. Normal MUPs, duration without polyphasia & moderate interference pattern was seen in left APB muscles.

Impression:- EPS study is showing neurogenic pattern in above sampled muscles with evidence of active dennervation & reinnervation in above sampled muscles suggestive of anterior horn cell disease.
